Abstract

Most of our world are becoming online like social intractions, transference of thoughts and ideas takes place through internet. These ideas are shared using documents using document files, videos,music files etc. On transferring these files, security of these transfer became very important aspect. Most of applications follows some rudimentary methods to secure these transference but implementation of these methods are very complex.So, it will be difficult to manipulate the already existing policy.On the other hand, there is a method called RWFM which is simple to design and update security policies.
